POST-SUMMIT SESSION:

- The Prometheus Payment System

The primary goal of the 2010 Summit is to continue the important ongoing dialogue about the appropriate role and structure of pay for performance and payment reform in both the private and public sectors. This includes exploring key policy issues and practical challenges for implementing pay for performance, its potential to achieve meaningful improvements in quality and efficiency, and its influence on healthcare delivery. Further, the 2010 Summit will feature new payment methods within the context of general healthcare payment reform.

The Summit will include presentations, panel discussions and case studies from leading researchers, policy experts and pay for performance administrators. Technical experts in performance measurement, data collection, public reporting, incentive design, and new payment methods will also lend their experience and perspectives to the Summit proceedings.

Senior executive leaders and national policy makers will provide keynote presentations on the most current healthcare reform landscape, implications for CMS, payment reform methods, and the use of incentives to improve quality and efficiency in the next generation of pay for performance. There will be ample opportunity for audience participation, questions and answers.

The preconference symposia allow key learning opportunities for attendees interested in pay for performance for “newcomers” or in-depth sessions on pay for performance and new payment methods.

The Mini Summits and concurrent sessions will provide in-depth perspectives on a variety of topics. These forums will offer case studies, current information and active audience participation. Concurrent sessions are organized by “track” and offer several best practices and case studies from experienced executives and experts.

The Post-Summit Session offers lessons learned from the field and implementation of the Prometheus Payment Model. Attendees will hear first hand from those who are implementing the Prometheus Payment model and learn the challenges they face, lessons learned from the implementation to-date and implications for the spread of episode of care payment.
