

## CALINX Pharmacy (Rx) 2.0

### System Requirements

#### Hardware

Recommended minimum hardware specifications are:

- Processor speed: 1 GHz
- Random access memory (RAM): 128 Mb
- 16 KB internal cache
- Hard disk space: 200 Mb

#### Software

The application may be installed on the following operating systems:

- Windows NT 4.0 Service Pack 6a
- Windows 2000 Service Pack 4
- Windows XP Professional

#### Installation Prerequisites

These components are required prior to installation of the application:

- Internet Explorer 6.0 Service Pack 1; available from Microsoft at:  
<http://www.microsoft.com/downloads/details.aspx?FamilyID=1E1550CB-5E5D-48F5-B02B-20B602228DE6&displaylang=en>
- WMI Core 1.5 (for Windows NT 4.0 SP6a only); available from Microsoft at:  
<http://www.microsoft.com/downloads/details.aspx?FamilyID=1E1550CB-5E5D-48F5-B02B-20B602228DE6&displaylang=en>

#### Component Prerequisites

These components will be installed by the installer if not already present:

- Microsoft .NET Redistributable 1.1.4322 or higher. .NET
- Microsoft MDAC 2.7 or higher (normally present on Windows 2000 and Windows XP)
- Microsoft JET 4.0 (normally present on Windows XP)

Note that the software download is more than 40 MB and it will take significant time to download. It is not recommended that the file be downloaded on a modem line (DSL or better connection recommended). If your system already has some of the software component prerequisites (such as Microsoft JET 4.0) then the footprint (the size of the application once installed on the computer) will not be as large as the install file, which includes this and other required programs
