

SUPPLEMENTAL MEASURE SET OVERVIEW

The supplemental measure set is a menu or library of additional measures that plans can use to supplement the core measure set at the local level. Selecting additional measures from the supplemental measure set provides an opportunity to increase standardization of measures outside the core measure set in order to decrease the resource burden and ensure comparability of results. The supplemental measure set includes:

1. External Accountability Set (EAS) measures that were not included in the core measure set
2. Measures that are not included in the core measure set, but are included in **more than one** of the other existing performance measurement sets required for Medi-Cal plans and providers
3. Additional measures that have gone through appropriate validation processes (e.g. NQF, CMS) and are included in existing Medi-Cal P4P programs
